I have received more than 200 nominations, including members from various sectors of the Election Committee, as well as senior and young engineers from different professional fields. I am grateful to the friends who signed and supported my candidacy. My supporters' list has continuously expanded. I am deeply encouraged.

Looking to the future, the engineering industry and the Hong Kong society as a whole still face many challenges. We must solve the deep-seated problems in the society and strive to build a new cosmopolitan city that will be more livable and workable. We have to grasp the opportunities brought by national development and the Greater Bay Area construction, and join hands to do our best for the development of the engineering profession and for the benefit of the community!

## Election Platform 2021

United for **CHANGE**, we build a better Hong Kong!

### Sustain Engineering Development

- Monitor the Government, smoothen approval of public services projects to ensure orderly roll out of new infrastructure.
- Strive to maintain a steady and high level of construction workflow, to prevent a Feast or Famine scenario.
- Infrastructure construction to lead economic recovery and to build a new metropolis to provide good living and employment.
- Strengthen engineering supervision, quality control and assurance, and industrial safety.

### Nurture Future Generations

- Expand the promotion opportunities and development for the engineering profession, offer more opportunities for employment and start-up.
- Empower professional and leadership skills for young engineers, widen their vision, and provide good work life balance.
- Cultivate interests in engineering and technological aspects to encourage our young generation to choose engineering as their career.
- Enhance training for young engineers to ensure fast track professional career.

### Promote Innovation & Technology

- Guide government administration in direction of electronic process, elevate efficiency and enhance their ability to face adversity.
- Foster co-operation among government, industry, academia and research sectors, accelerate application of innovative technology.
- Promote technological research, commercialization and re-industrialization.
- Advance the joint development of the innovation and technological sector with Greater Bay Area counterparts.

### Protect the Environment

- Combat the effects of climate change and strive to achieve carbon neutrality.
- Promote green construction, improve energy efficiency for buildings.
- Promote cleaner fuel mix for power generation, develop new and green energy source for transport.
- Promote circular economy and build a green, low carbon smart city.

### Induce Economic Growth

- Promote large scale infrastructure projects, increase human resources and employment opportunities.
- Increase professional positions and provide more resources in public administration to improve promotion prospects of our profession.
- Establish pillar industries, and develop our leading industries, revitalize our traditional industries to provide more opportunities in our profession.
- Capture prospects for Hong Kong professional to Greater Bay Area and Belt and Road projects.

### Benefit the Community

- Supervise government to re-plan project management structure, accelerate development in land, buildings, transport, railway, environmental and innovative technology sectors.
- Induce government to improve the public housing layer structure, with attention to the middle class and young families to enable their home ownership.
- Unite our profession, serve the community, and promote opportunities to join public services organizations to enable them to participate in formulation of public policies.
- Build a safe and harmonious society.
