

Engineering Prospects and Opportunities in Hong Kong

For generations, engineering professionals have played a vital and significant role in the advancement of our society, serving it by helping to build or manufacture practical and high-quality infrastructures or daily necessities that benefit our city and everyone living in it. The vision for Hong Kong as unveiled in various Hong Kong Special Administrative Region Government's initiatives are fueling an unprecedented need for more young talents to join the engineering profession to support the impending development of our city meeting the imminent public demand.

There is thus a very promising future for this vital and noble profession.

The Hong Kong Institution of Engineers (HKIE) and Western Canada of Hong Kong Economic and Trade Office (HKETO) are organising a joint seminar where the HKIE Immediate Past President Ir Aaron BOK will present the current and planned infrastructure projects as well as engineering career opportunities in Hong Kong; and the Principal Consultant of Western Canada of HKETO, Mrs Catherine YUEN, will introduce various facilitation measures for talents and professionals working and living in this Asia's World City.

The seminar will be followed by a Q & A and networking session. The seminar is free but prior registration is required. All engineering students and recent graduates are welcome.

Ir Aaron BOK
Immediate Past President, HKIE

10 Apr 2024 (Wed)
16:00–17:30

The University of British Columbia, Room 1203 - Civil & Mech. Eng. Reading Room (CEME 1203), 6250 Applied Science Lane, Vancouver, BC V6T 1Z4

Facilitation Measures for Talents

Mrs Catherine YUEN
Principal Consultant, Western Canada of HKETO
