

## Engineering Prospects and Opportunities in Hong Kong

For generations, engineering professionals have played a vital and significant role in the advancement of our society, serving it by helping to build or manufacture practical and high-quality infrastructures or daily necessities that benefit our city and everyone living in it. The vision for Hong Kong as unveiled in various Hong Kong Special Administrative Region Government's initiatives are fueling an unprecedented need for more young talents to join the engineering profession to support the impending development of our city meeting the imminent public demand.

There is thus a very promising future for this vital and noble profession.

The Hong Kong Institution of Engineers (HKIE) and Hong Kong Economic and Trade Office Toronto (Toronto ETO), are organising a joint seminar where the HKIE Immediate Past President Ir Aaron BOK will present the current and planned infrastructure projects as well as engineering career opportunities in Hong Kong; and the Director-General of HKETO, Ms Emily MO will introduce various facilitation measures for talents and professionals working and living in this Asia's World City.

The seminar will be followed by a Q & A and networking session. The seminar is free but prior registration is required. All engineering students and recent graduates are welcome.

Ir Aaron BOK  
Immediate Past President, HKIE

**8 Apr 2024 (Mon)**

**12:00–13:30**

**University of Toronto,  
Room 380, Myhal Centre for  
Engineering Innovation and  
Entrepreneurship,  
55 St George Street,  
Toronto, ON M5S 0C9**
